**DETAILED ACTION*****Drawings***

The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the logos and embossments, layer of material attached to the bottom surface and the steps of the claimed method must be shown or the feature(s) canceled from the claim(s). No new matter should be entered. Steps of methods can readily be shown by way of a flow chart.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

***Claim Rejections - 35 USC § 101***

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-12 are rejected under 35 U.S.C. 101 because the disclosed invention is inoperative and therefore lacks utility. The claims call for the diameter of the opening of the through holes to be the function of  $2\sqrt{2tR-t^2}$ . A 10 inch diameter ball and 10 inch thick sheet of material would result in a hole of 0 inches, or no hole at all. As such, applicant's invention is considered inoperative.

***Claim Rejections - 35 USC § 103***

Claims 1-12 are rejected under 35 U.S.C. 102(b) as anticipated by or, in the alternative, under 35 U.S.C. 103(a) as obvious over Galowitz 4,214,684.

Art Unit: 3711

Shown is a sheet of material 8B with through holes. While Galowitz fails to discuss any dimensions in the prior art it is inherent that the diameter of his holes is a function of the claimed equation. Alternatively, the size diameter of the holes is an obvious matter of choice as held by *Gardner v. TEC Systems, Inc.*, 725 F.2d 1338, 220 USPQ 777 (Fed. Cir. 1984), cert. denied, 469 U.S. 830, 225 USPQ 232 (1984), the Federal Circuit held that, where the only difference between the prior art and the claims was a recitation of relative dimensions of the claimed device and a device having the claimed relative dimensions would not perform differently than the prior art device, the claimed device was not patentably distinct from the prior art device. The claimed thicknesses of the material, hole spacing and ball size and materials has been held to be an obvious matter of choice. Applicant has not shown where such is critical to the claimed invention by solving any particular problem or producing any unexpected results. In *re Kuhle*, 526 F.2d 553, 188 USPQ 7 (CCPA 1975). More particularly as to claim 9, Fig. 3 shows at 8C where a layer of material covers the through holes.

#### **Conclusion**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Galli, Kleinschmidt, McCormick, Kidd, Slattery, Finch, Weber, Glantz, Fber, Craig, Medendorp, Einhorn and Adams show ball holders.
